MICCTION: MEAKLY IWWARD RECTIFYING POTASSIUM CHANNEL.

SUBCUIT: HOMODIMER (POTENTIAL).

SUBCELLULAR LOCATION: INVEGRAL MEMBRANE PROTEIN (POTENTIAL).

TISSUE SPECIFICITY: WIDELY EXPRESSED WITH HIGH LEVELS IN HEART

TISSUE SPECIFICITY: WIDELY EXPRESSED WITH HIGH LEVELS IN KIDNEY.

MISCELLANDOUS: INHIBITED BY BARIUM, QUININE, QUINIDLE AND

INTERNAL ACIDIFICATION. ACTIVATED BY PROTEIN KINASE C.

SIMILARITY: BELONGS TO THE TWO PORE DOMAIN FAMILY OF POTASSIUM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ħ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EGWSALDAIYEVVITLTTIGFGDYVAG-GSDIEYLDFYKPVVWFWILVGLAYFAAVLSMI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               85
                                    FUNCTION: PH-DEFENDENT, VOLTAGE-INSENSITIVE, BACKGROUND POTASSIUM CHANNEL PROTEIN, RECTIFICATION DIRECTION RESOURS FROM POTASSIUM ION CONCENTRATION ON EITHER SIDE OF THE MESBRANE. ACTS AS AN OUTWARD RECTIFIER WHEN EXTERNAL POTASSIUM CONCENTRATION IS LOW. WHEN EXTERNAL POTASSIUM CONCENTRATION IS INWARD. SUBCELLULAR LOCATION: INTEGRAL MESBRANE PROTEIN (POTENTIAL).

TISSUE SPECIFICITY: WIDESPREAD EXPRESSION IN ADULT. STRONGEST EXPRESSION IN PANCREAS AND PLACENTA. LOWER EXPRESSION IN BRAIN, LUNG, PROSTATE, HEART, KIDNEY, UTERUS, SMALL INTESTINE AND COLON. MISCELLANBOUS: INHIBITED BY EXTERNAL ACTIVATED BY HALOTHANE AND ISOFLURANE.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of human TASK1 (TWIK-related acid-sensitive K+ channel), a member of a new family of 2P domain pottassium channels, also including TWIK-1 (see AAY79673) and novel TASK2 (see AAY79675). TASK1 is expressed in many different tissues, and at particularly high levels in pancreas and placenta. Host cells expressing TWIK-1 family members can be used to screen for substances that modulate the activity of members of the TWIK-1 family of potassium channels. The drugs identified may be useful in the treatment of diseases of the heart or of the nervous system, such as epilepsy, arrhythmia, vascular diseases, neurodegenerative diseases, kidney, liver or pancreas diseases, hypertension, diseases associated with ischaemia or anoxia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid encoding a non-inactivating outwardly rectifying potassium transport channel, designated TASK2, useful in the treatment of hypertension or dysfunctions of the kidney, liver or pancreas -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          XXCCCCCCCCCCCCXXXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of murine TASK .....K-related acid-sensitive K+ channel), a member of a new tamily of 2P domain potassium channels, also including hu in TWIK-1 (see AAY79673), human TASK1 (see AAY79674) and noted human TASK2 (see C AAY79675). Human and mouse TASK proteins shore 95% identity, indicating that they are products of ortho or genes. Host colls expressing TWIK-1 family members can be used to screen for substances that modulate the activity of the TWIK-1 family of potassium channels. The drugs identify of useful in the treatment of diseases of the TWIK-1 concept as epilepsy, arrhythmia, vascu. It is draw be useful in the treatment of diseases of the system, such as epilepsy, arrhythmia, vascu. It is draw is diseases, to hypertension, diseases associated with anomalies. In hormone secretion, and marche diseases associated with anomalies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                The present sequence is encoded by an express it sequence tag (EST) which is related to a cDNA encoding a human DKCN1 pc ypeptide. The polypeptide is a member of the potassium channel family. The DKCN1 polypeptides and polynucleotides are useful for treating diseases including cancer, pulmonary, cardiovascular, inflammatory or reral diseases, pain, psychiatric disorders including depression and schizophrenia.
                                                                                                                                                                                                                                                                  neurodegenerative disease including Alzheimen's, neurological disomigraine, epilepsy, sleep-related disorders, ectile dysfunction alopecia. DKCNI polynucleotides are useful a vilagnostic reagents detecting mutations in the associated gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polypeptides and polynucleotides of the potassium channel family, useful for identifying agonists/antagonists of herapeutic use an diagnosis and treatment of cancer, pulmonary, ordiovascular,

The present sequence represents tandem pore domain weak inward potassium (K+) (TWIK) polypeptide. The specification describes TWIK2, TWIK3, TWIK4, TWIK5, TWIK6, TWIK7, and TWIK1. The TWIK channel nucleic acids and proteins are used in screening assays to identify candidate compounds which are potential pesticides or therapeutics. The TWIK channel nucleic

in living cells that can be sticide or the standard primers. TWIK regulation, and their use as pesticide or the standard primers. TWIK hybridisation probes and replication/ampli: The strate monoclonal or primers are useful as immunogens that would specifically and in assays to identically enginetrate animals may be used in studying TWIK channels. They, and for screening animals may be used in studying TWIK channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     identifying new drug targets, therapeut in gnosis useful in treating disorders associated associated as the second                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  glvmfqsigervnrlssyvikavrsslrckrtvasev. ... vttlssltiaggaaaf 178

The TWIK channel nucleic acids can be used for generating mutant phenotypes in animal models or in living cells that can be used to study the ion channels, their regulation, and their use as pesticide or drug targets, and as hybridisation probes and replication/amplification primers. TWIK channel proteins are useful as immunogens to generate monoclonal or polycional antibodies, and in assays to identify molecules that would specifically bind to them. Genetically engineered metazoan invertebrate animals may be used in studying TWIK channel activity, and for screening and identifying new drug targets, therapeutic agents, diagnostics and prognosis useful in treating disorders associated with ion channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 5; Page 87-88; 96pp; English

                                                                                                                                                                                                                                                                                                                  The present sequence represents a mechanical contains a protein designated TREK-1. The protein is activated by polyunsaturated fatty acids, particularly an individual and by riluzole. The protein is used to screen for softic modulators which are useful for treating or preventing diseas, of the heart and nervous systems in humans and animals, e.g. epilepsy rediovascular disease (arrhythmia), neurodegeneration (particular disease contains and muscular disease. The protein itself may be used to these diseases. Antibodies specific for the protein are used to these diseases.

Antibodies specific for the protein are used to these diseases.

The polynucleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diagnosis may be used in the
